

# MLCouncil — report operativo

## Sintesi

Portfolio Alpaca: \$108,885  
Return vs primo snapshot: 8.9%  
Net/Gross exposure: 0.08% / 0.08%  
Drawdown corrente: 2.37%  
Sharpe stimato: 0.00  
Breaches: 0

Backtest: Sharpe 0.96 | MaxDD -40.67% | CAGR 28.1%  
Final equity: 324,016|Costi stimati: 9,277 | Turnover: 14.2%

Walk-forward OOS Sharpe: 0.64 | OOS MaxDD: -5.91% | PBO: 0.19  
Window count: 16 | OOS turnover: 43.8%  
Equal-weight delta Sharpe: -0.49

## Checkpoint / stato corrente

LGBM latest run: 2026-04-27 | IC mean 0.0061 | ICIR 0.834  
LGBM 2026-04-27 | 2840 KB | IC mean 0.0609 | ICIR 0.928  
LGBM: 2026-04-22 | 17.8 KB  
Regime corrente: transition | bull 0.00% | bear 0.00% | transition 0.00%

## Indicatori chiave

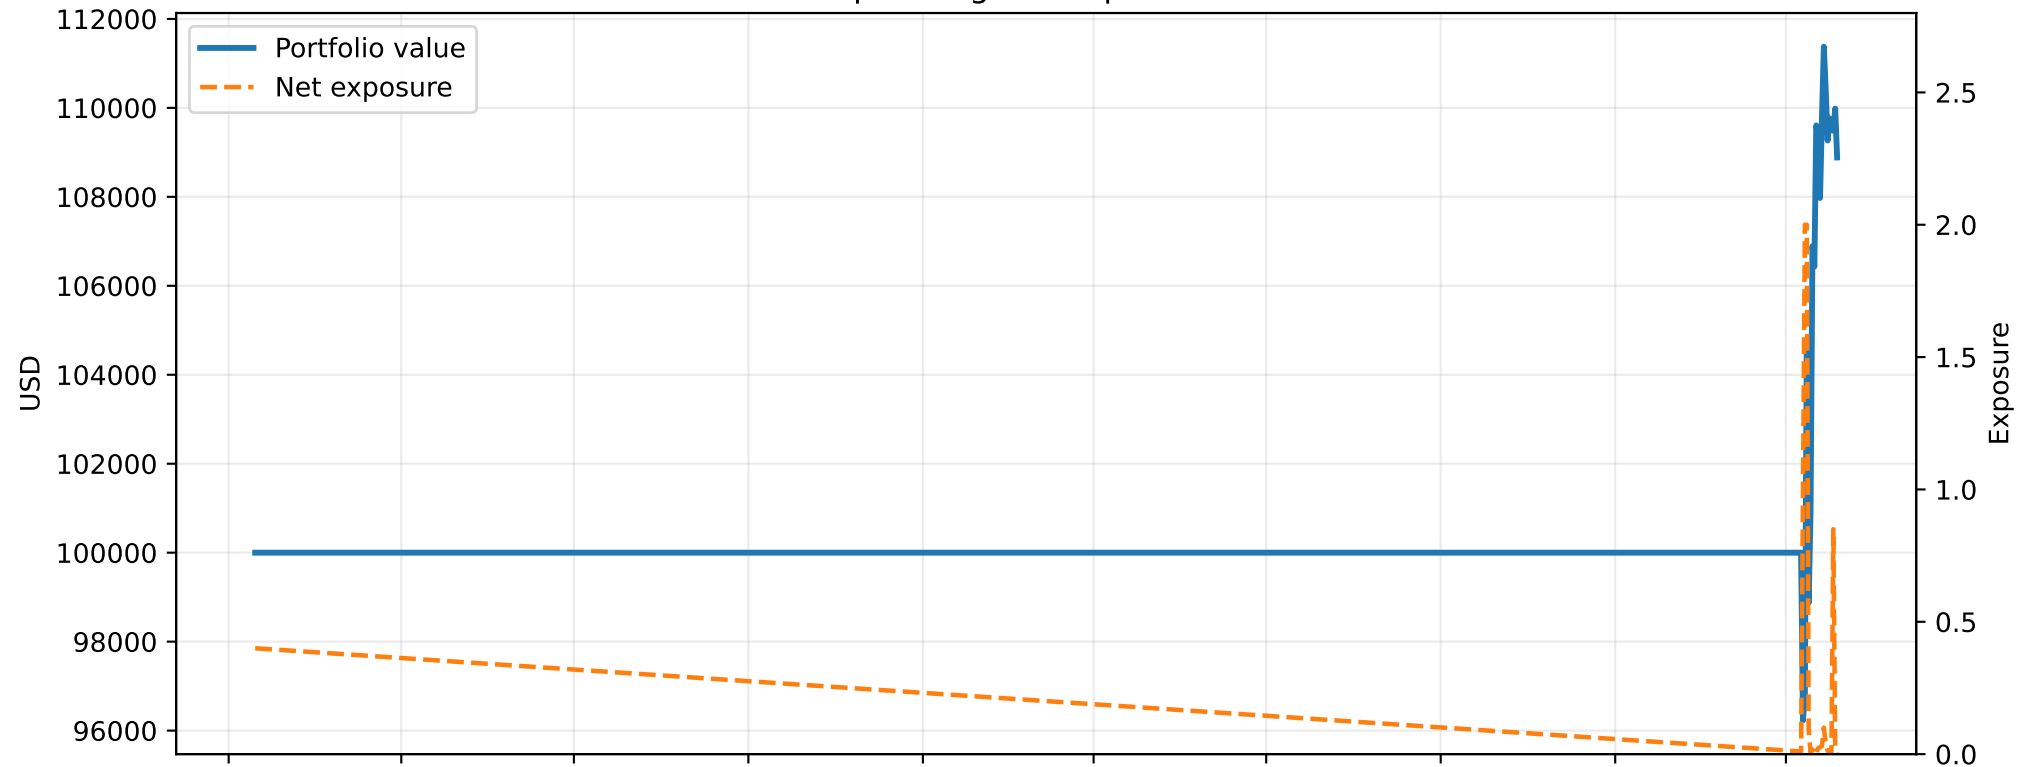

| Metrica               | Valore    |
|-----------------------|-----------|
| Backtest Sharpe       | 0.96      |
| Backtest MaxDD        | -40.67%   |
| Backtest CAGR         | 28.1%     |
| Backtest Final Equity | \$324,016 |
| WF OOS Sharpe         | 0.64      |
| WF OOS MaxDD          | -5.91%    |
| WF PBO                | 0.19      |
| WF Windows            | 16        |
| Alpaca Value          | \$108,885 |
| Alpaca Net Exposure   | 0.08%     |

## Note di lettura

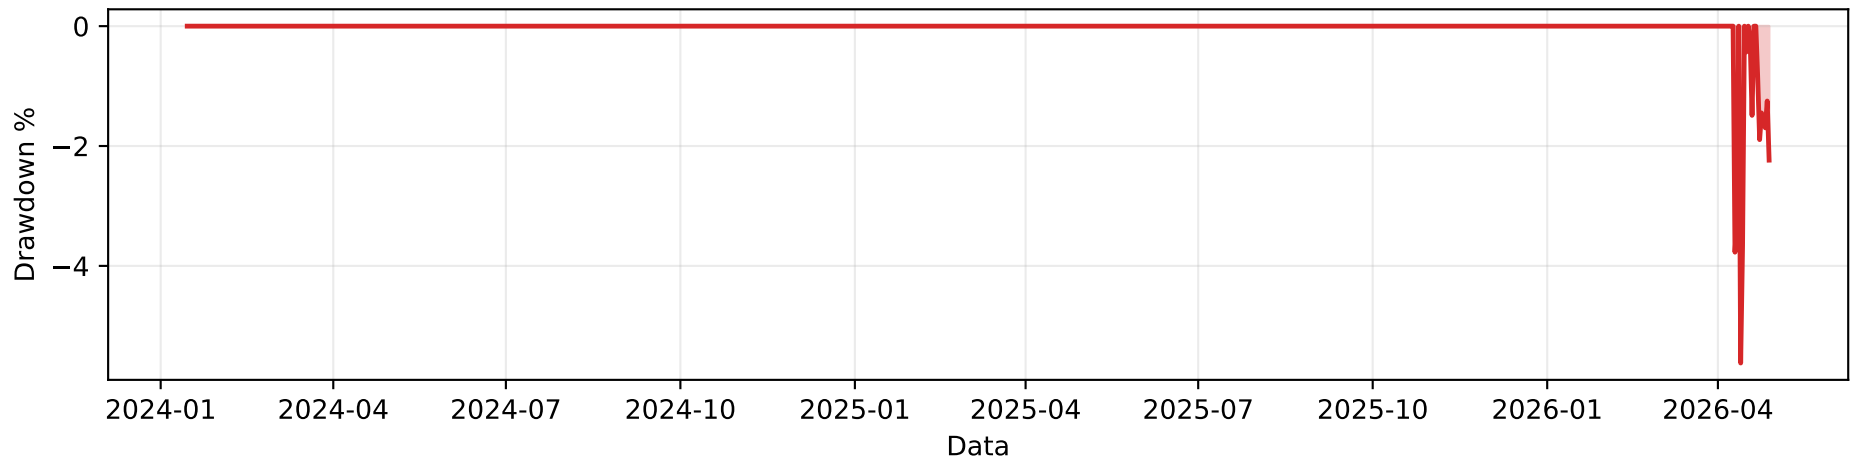

- Il report usa snapshot rischio reali dal repository locale.
- Il backtest è quello strategico end-to-end già persistito in data/results/.
- L evoluzione modelli deriva dai run MLflow LGBM registrati nel DB locale.
- Se un grafico non ha dati, la pagina resta vuota invece di inventare valori.
